三、阅读理解（共 10 题，每题 2 分，满分 20 分）

Passage A

The Qinghai-Tibet Plateau is known as "the Roof of the World"（世界屋脊）. It is the highest plateau in the world, with an average height（平均高度）of more than 4,000 meters. For this reason, it is also called "the Third Pole"（第三极）— after the North Pole and the South Pole.

The plateau is home to the world's highest mountain — Mount Qomolangma — which is 8,848.86 meters high. The air there is much thinner than at sea level（海平面）, so people who visit for the first time may feel uncomfortable（不舒服的）. But the sky is bluer and the stars at night are brighter than anywhere else.

There are hundreds of beautiful lakes on the plateau. The largest one is Qinghai Lake. The water is so clear that you can see the bottom（底部）. The colour of the water changes from blue to green at different times of the day.

The plateau is also the source（源头）of many of Asia's great rivers, including the Yangtze River and the Yellow River. That's why protecting the environment of this area is so important — not just for China, but for the whole of Asia.

#	题目	选项
30	Why is protecting this area important?	A. Because it is the highest plateau. B. Because it is famous. C. Because many rivers start there. D. Because people live there.

Passage B

Lake Baikal (贝加尔湖) is in Russia. It is the deepest lake in the world and also the oldest — it is about 25 million (百万) years old. The lake is 1,642 meters deep at its deepest point. That is deeper than most parts of the ocean floor (海底) !

The water in Lake Baikal is some of the clearest in the world. In winter, the lake freezes (结冰) , and the ice can be up to 2 meters thick (厚) . You can even drive a car on it!

What makes Lake Baikal even more amazing is the wildlife (野生动物) . More than 2,500 kinds of animals live in and around the lake, and about 80% of them cannot be found anywhere else in the world. One of the most famous animals is the Baikal seal (贝加尔海豹) — the only seal that lives in fresh water.

However, like many other natural wonders, Lake Baikal is facing problems. Pollution (污染) and climate change (气候变化) are making the water less clear than before. Scientists suggest that we act now to protect this ancient lake, or it could get worse year by year.
